

Prosthetics replace missing or amputated limbs, restoring weight-bearing function and confidence.

Common orthotic cases we treat include:

CCL tears, carpal hyperextension (wrist collapse), Achilles tendon rupture, and more

Each device is custom-fabricated to your pet's unique anatomy

Advanced Light-Based Healing Technology

Laser therapy uses specific wavelengths of light to stimulate cell regeneration, increase blood circulation, and reduce pain and inflammation. This non-invasive treatment accelerates healing and provides natural pain relief for a wide range of conditions.

How Laser Therapy Works

Therapeutic laser therapy, also known as photobiomodulation, delivers specific wavelengths of light energy deep into tissues. This light energy is absorbed by cells, triggering biological processes that reduce inflammation, relieve pain, and accelerate healing.

The treatment is completely painless and most pets find it very relaxing. Many show improvement after just a few sessions, though the number of treatments needed varies by condition. Sessions typically last 5-20 minutes depending on the size of the treatment area.

Why Pet Parents Choose Laser Therapy

From aging dogs with arthritis to cats recovering from surgery, laser therapy delivers measurable, lasting results across a wide range of conditions.

Natural Pain Relief

Laser therapy stimulates the release of endorphins — your pet's natural painkillers — and blocks pain signals at the nerve level. Effective for both acute injuries and chronic pain conditions like *arthritis in dogs and cats*.

Accelerated Healing

Photons from the laser increase ATP production in cells, supercharging the body's natural healing response. Wounds, post-surgical incisions, and soft tissue injuries heal significantly faster with veterinary laser treatment.

Reduced Inflammation

Cold laser therapy inhibits inflammatory cytokines and improves lymphatic drainage, reducing swelling and heat in affected joints and tissues — a major benefit for pets with *hip dysplasia, tendinitis, or disc disease*.

Improved Mobility & Flexibility

By reducing pain and inflammation, laser therapy directly restores range of motion. Many senior pets treated at Healing Paws Center return to activities they had given up — walks, stairs, playtime — within just a few sessions.

Nerve Regeneration

Laser therapy is one of few non-invasive treatments shown to support nerve tissue repair, making it valuable for pets with *degenerative myelopathy*, *intervertebral disc disease (IVDD)*, or post-surgical neurological recovery.

Zero Side Effects

Unlike NSAIDs and long-term pharmaceuticals, laser therapy carries no risk of organ damage, drug interactions, or side effects. It is safe for pets of all ages — including senior animals with compromised kidney or liver function.

Laser Therapy Helps With...

Our veterinary laser therapy program is tailored to your pet's specific diagnosis and health history. Common conditions we treat include:

- Osteoarthritis & Joint Pain

- Hip & Elbow Dysplasia

- Intervertebral Disc Disease (IVDD)

- Post-Surgical Recovery

- Soft Tissue Injuries & Sprains

- Chronic Wounds & Hot Spots

- Skin Conditions & Dermatitis

- Ear Infections (Otitis)

- Degenerative Myelopathy

- Lick Granulomas

- Dental & Oral Inflammation

- Cancer-Related Pain Management

FREQUENTLY ASKED QUESTIONS

Is laser therapy safe for dogs and cats?

Yes. Cold laser therapy (LLLT) is FDA-cleared, extensively studied, and widely considered one of the safest modalities in veterinary rehabilitation medicine. It is non-invasive, and produces no heat damage.

How many sessions does my pet need?

This varies by condition and severity. Acute injuries may respond within 3–5 sessions. Chronic conditions like arthritis typically benefit from an initial series of 6–8 sessions over 2–3 weeks, followed by periodic maintenance sessions. We include laser therapy into our physical therapy sessions.

Can laser therapy replace my pet's medications?

Laser therapy can significantly reduce or sometimes eliminate the need for pain medications in appropriate cases — especially NSAIDs. However, we always assess each pet individually. Our goal at Healing Paws Center is to use the least invasive, most natural approach possible while keeping your pet comfortable and safe.
